

FUND Globals Whitepaper

FUND Globals (□FUND□) is a DeFi aggregator (□FUND□) for diversified yield generation on Binance Smart Chain (□BSC□). FUND aims to allow investors to FUND capital into lending platforms, liquidity pools, vaults, and other DeFi products in an automated and diversified process.

As DeFi evolves, it is likely that more and more unique yield generating products will emerge, however at this juncture, two main yield generating products stand out: 1) Liquidity Pools/Farms and 2) Vaults/Lending. Acting a lot like a real-world FUND Globals fund, we call this □FUND□, capital is invested by the investor through an intermediary, in this case, FUND Globals, to efficiently automate yields generation. Essentially for a fee, FUND provides a platform for diversification and automation, enabling easy allocation of capital into desired end-products.

FUND is building the next major DEX tool to be used by the BSC marketplace.

ABOUT US

Automation and Diversification Mechanics

The automation and diversification mechanics is based on a very simple yet widely regarded assumption, that the market as a whole, is the best allocator of capital (aka Efficient Market Hypothesis). Hundreds of thousands of BSC users make a decision about where, and how much of their capital to invest. While not all users agree, in aggregate, and over time, they form an efficient consensus about risks and rewards. To overweight and underweight an allocation, we refrain from making predictions and rely on the Random Walk Hypothesis, which, put simply, states that the best predictor of tomorrow's returns is yesterday's returns.

Each FUND covers a select list of products or platforms and uses a formula to make decisions about how to allocate among the covered products and when to rebalance. The factors driving decisions are:

- > Total Value Locked (TVL)
- > Last Period APY
- > Platform Fees
- > Rebalance Thresholds

USE CASE SUMMARY

Team and Governance

FUND Globals is led by an experienced full-stack developer, a successful online marketing professional, and a finance industry veteran.

The inspiration for the launch of FUND Globals really came down to a quest to find ways to automate investing in DeFi and failing.

As participants of various crypto communities, the team recognizes communities importance for long-term success, and ultimately FUNDer Finance will be governed by FUND holders.

The goal is to launch core products and hand the governance over.

ROAD MAP

PHASE | 1

INITIAL LAUNCH (COMPLETE)

FUND was successfully launched on May 3rd, 2021 with a 10% transactional fee, which took 5% of buys/sells and re-distributed them to existing holders, while the other 5% was sent directly to the Liquidity Pool (LP).

10% of the original supply is in the developers fund for future marketing campaigns.

RENOUNCED CONTRACT (COMPLETE)

FUND renounced ownership of the contract, by locking 90% of tokens in the liquidity pool until the year 2099.

This demonstrates to the community that they can trust in the developers, and the long term viability of the project, as new applications are added to the token.

AUDIT

We are actively seeking a TechRate audit of the FUND smart contract code, which we will make publicly available on our GitHub, and our website.

You can also see our BSC contract and token data, and our locked liquidity contract on there as well.

PHASE | 2

MARKETING INITIATIVE

The developers have dedicated an initial \$30,000 marketing budget to lay the foundation for community incentives and social impact over the first sixty (60) days.

The future marketing budget will be decided by periodic, community voting, which will determine where excess funds will come from once the 60 days are over.

We currently have active social media campaigns in place for Telegram, Instagram, Twitter, Facebook, etc. Our goal is to reward FUND community engagement!

We plan to list or are actively seeking listing the following:

- Coinmarketcap
- Coingecko
- Coinhunt
- Poocoin Dex-
- tools Bogged
- Finance
- Pancakeswap

ROAD MAP

PHASE | 3

DECENTRALIZED APPLICATION (DAPP)

FUND developers will launch FUNDGlobals.com which will give holders utility by unlocking premium features based on your FUND wallet balance.

Token holders will have the ability to interact with the main features of our FUND Decentralized App (DApp) which will greatly improve portfolio management. The features are:

- DApp iPortfolio management indicators
- Wallet connection with data pulling data from web3 integration.
- BSCscan API connection w/ data pull.
- USD value conversions for any token balances.
- "Price floor evaluator" (algorithmic trading tool using BSCscan).
- Bitquery API calls for data.

UTILITY OF FUND TOKEN

To further incentivize holders, we will be upgrading these features and integrating them into other applications that will use the FUND token

PHASE | 4

NEXT STEPS

In this phase the core team will be focused on the following:

- AMA's
- Exchange listings
- NFT Development
- DApp and Second Layer Development

FUTURE PARTNERSHIPS

- Yield farming or Pool integration with FUND token
- Major exchange listings (to be decided by community)

FUTURE INTEGRATIONS

DApp

- DApp iPortfolio management tools and indicators directly on app.
- Wallet connection with data pull web3 integration.
- BSCscan api connection w/ data pull.
- USD value converting for any token balances.
- Price floor evaluator (my algo using BSCscan).
- Bitquery api calls for data.

Use case NFT's

- FUND token burns will generate random NFT's.
- Rare NFTS will act as second layer access to the DApp's and advertisement portals.

Features to be Built into DApp

- Asset management tools with tracking and history
- Risk management tools and scoring system
- DApp access levels will be a 2nd layer holding mechanism for FUND
- Newly launched token progress and grading tools
- Advertisement platform that will also be a 2nd layer holding mechanism for FUND token.
- Random NFT generation with use case based on burning FUND.
- NFT market place to buy and sell

TOKENOMICS

SUMMARY

SUMMARY
INITIAL SUPPLY 1,000,000,000,000,000 FUND

PER TRANSACTION:

- 5% Redistribution to holders
- 5% To liquidity pool

Dead wallets and marketing wallet are receivers of reflection.

YIELD FARMING - AUTOSTAKING

- Auto staking mechanism directly on wallet (Metamask/ Trust).
- 5% taken from every transaction and divided amongst holders of FUND.
- 5% taken from every transaction and returned to the liquidity pool.
- Community vote on yield farming integration and partnerships
